

ML jobs

List

1. Research Scientist, 3D Computer Vision & Machine Learning (Meta)
2. Machine Learning Researcher (Apple)
3. Research Scientist, Generative Modeling (Google Deepmind)
4. ML Architect Engineer (AMD)
5. Senior Applied Research Scientist, Generative AI (NVIDIA)
6. Research Engineer – Machine Learning (Allegro)

Skills

- Modern ML/DL (6/6)
- Experience communicating research for public audiences of peers
- Python
- C++
- Experience with real world system building
- 3D computer vision
- Currently has or is in the process of obtaining a PhD
- BS and a minimum of 3 years relevant industry experience
- Strong academic, work and/or publication record in the CV/ML domain
- Knowledge and experience in temporal reasoning/representation and foundation/large language models
- Optimize machine learning models for deployment
- Mentor junior team members

Selected skill - Experience communicating research for public audiences of peers

- 4/6 offers require this skill
- Collaboration between scientists and scientists, but as well with the business people is important
- How? Talk about your projects on meetups, share knowledge with teammates, publish papers on conferences, create conferences' posters about your projects
